PROFILE SUMMARY

Senior Android Developer with 9+ years on consumer apps in news, financial markets and food delivery, currently on products with over 10 million downloads. Day-to-day work is Kotlin, Jetpack Compose, Coroutines and Flow on an MVVM and Clean Architecture codebase, integrating REST APIs, WebSockets, Firebase and local persistence with dependency injection throughout. Takes features from design discussion through release management on Play Store, including test-driven development, CI/CD, profiling and crash work in between, and reviews code and mentors the junior Android developers on the team.

WORK EXPERIENCE

Senior Software Development Engineer

Times Internet Limited Mar 2022 - Present

- Android developer on the Economic Times and ET Markets apps, both native with Java & Kotlin.
- Wrote a custom networking library module used across several apps in the group, handling response caching, Protobuf serialization and Cronet transport, cutting payload size and request latency on slower connections.
- Cut cold start time by 25% after profiling startup traces and moving non-critical initialization off the main thread. Reduced crash rate by 20% by reworking error handling around the feed and network layers.
- Built the ET Prime subscription flow (entitlement checks, plan management, payments) and later pulled it out into an SDK that five other apps in the group now use instead of rebuilding it.
- Integrated LLM-powered features into the Android app using open LLM APIs and the Grok API, with a Kotlin client layer handling requests, streamed responses, timeouts and error fallback.
- Handle Play Console releases: staged rollouts, app signing, pre-launch reports and crash triage after each rollout.
- Added GrowthRx, Firebase Analytics and Crashlytics instrumentation, which is what product now uses to decide feature priorities.
- Follow a test-driven approach on new modules, writing unit and UI tests with JUnit, Mockk and Espresso; owned modules sit at 75%+ coverage. Releases go out through CI/CD pipelines on Git-based workflows.
- Mentor 4+ junior Android developers through code review and design discussions, including training them on AI tools like Claude Skills, Kiro and Cursor, and work in two-week Scrum sprints with product, design, QA and backend.

Senior Member of Technical Staff

Amanzi Technologies (Client: NEC Corporation) Mar 2021 - Feb 2022

Delivered Android and React Native applications for the ASHA government kiosk app and the VerifHire identity verification platform. Built ASHA offline-first in Kotlin with MVVM and Jetpack components, keeping it secure and responsive for health workers with no signal in the field.

Senior Software Developer

Incaendo Technologies Dec 2018 - Mar 2021

Developed secure ordering, payment and live order-tracking features for the Domino's app across several payment gateways and REST APIs. Improved transaction success rate by 15% by reworking error handling and adding retry logic on failed payments.

Software Engineer

Indicorp IT Solutions Apr 2017 - Nov 2018

Built and shipped Android features in Java, fixed defects across the release cycle, and ran manual and unit testing before each build went out.

EDUCATION

B.Tech, Computer Science & Engineering Jul 2012 - Jun 2016
Jaypee Institute of Information Technology, Noida

KEY SKILLS

Languages: Kotlin, Java

Multiplatform: Kotlin Multiplatform (KMP), Compose Multiplatform (CMP)

Cross-Platform: React Native

Architecture & Design: Android Architecture, Clean Architecture, MVVM, Repository Pattern, SOLID Principles, Object-Oriented Design, Dependency Injection (Hilt), Modularization

Android Jetpack: Jetpack Compose, ViewModel, LiveData, WorkManager, Navigation, Room, DataStore, Coroutines, Flow (StateFlow, SharedFlow), XML UI, Material Design, Android SDK

Networking & Security: Retrofit, OkHttp, Ktor, RESTful APIs, HTTP, WebSockets, Firebase, JWT Authentication, Secure Storage

Data & Persistence: Relational Databases, SQL, SQLite, Room, Offline Storage & Data Persistence

Performance: Threading & Concurrency, Memory Management, Latency Optimization, Crash Rate Reduction, Android Profiler, Baseline Profiles

Testing: Test-Driven Development (TDD), JUnit, Mockk, Unit Testing, UI Testing, Debugging, Code Reviews

Tools & Process: Git, GitHub, GitLab, Gradle, CI/CD & Automated Delivery Pipelines, Firebase Analytics, Agile Scrum, Jira

Release & Deployment: Google Play Console, Release Management, Staged Rollouts, App Signing, Crashlytics

AI Integration: LLM API Integration in Android (Open LLM APIs, Grok API), Streaming Responses, Prompt Handling

AI Tooling: Claude (incl. Skills), Kiro, Cursor, Gemini in Android Studio

PROJECTS

Economic Times · 10M+ downloads App Link
News and financial content app. AI-summarised Quick Read and Stock Reports.

ET Markets: Stock Tools & News App Link
Real-time market data, stock screeners and company financials.

Domino's Pizza Delivery App Link
Secure checkout across wallets, cards and net banking, plus live order tracking with dynamic ETA.
